ASSUMPTIONS

The strategy of buy-and-hold is applied
Correlations and covariances between assets remain stable throughout the ye
Uses MSCI World as benchmark.
There is no changes in monetary policy, markets and geopolitical regime.

CRITICISMS

-There is an overdependence on the US and the Asian markets, which is ex risks(sanctions, military conflicts)which reduces true diversifiation.
-For Max drawdown, it assumed portfolio weight was fixed over time which is market downs

CONCLUSIONS

-The portfolio exhibits an risk averse with expected return of 13.16% for a vo above the benchmark.

-Relative performance is confirmed by the performance curve and the drawdo market downs.

-Stress tests highlight equity exposure, with the portfolio experiencing decline 20% and -30% shocks.

-The interest rate analysis reveals a slight positive impact in the event of a +1(
